Subject wamsley creek

I live one mile north of Wamsley Creek, four miles north of Cameron, MO. I fish the creek from water holes of accumulative rains and spend recreational time at the creek during the year.

I strongly object to waste dumping in this water way.

Sincerely

David A. Weese

I have not been able to spend time at the Wamsley Creek this year due to business and health; however I noticed the last survey was documented in the midst of one of the driest years Missouri has experienced.

A wading area is at the old rock quarry sight that is between Harris Road and state highway EE. This area is accessed by following the creek because of private land on both sides. Minnows are harvested at the Harris Street bridge for fishing . The fact that wild game consumes Wamsley Creek water is harvested in this community ,some livestock water, fur trapping is only accessible by wading the creek and the creek eventually flows into the Grand River is substantial concern on keeping Wamsley Creek from having secondary sewage from human waste discarded into the unnamed tributary of Wamsley Creek.

Mr. Weese,

We are reviewing all the comments we have received telling us how Missouri citizens use their creeks and I am trying to pin down exactly where swimming and wading , etc., occur.

Regarding the e-mail you sent 8/02/08: You stated that you fish the creek from water holes. Your comments are appreciated; however, if possible, I would like to get a more detailed location of where or which part of the creek you use. Are the holes near Irwin Road, for example? or between Irwin and Harris roads? or do you fish farther upstream near Hwy EE? I am available via telephone Monday through Friday from 7:30 am - 4:00 pm. I also have voicemail and e-mail available if you cannot contact me during those times.

Here is your original e-mail for your reference:

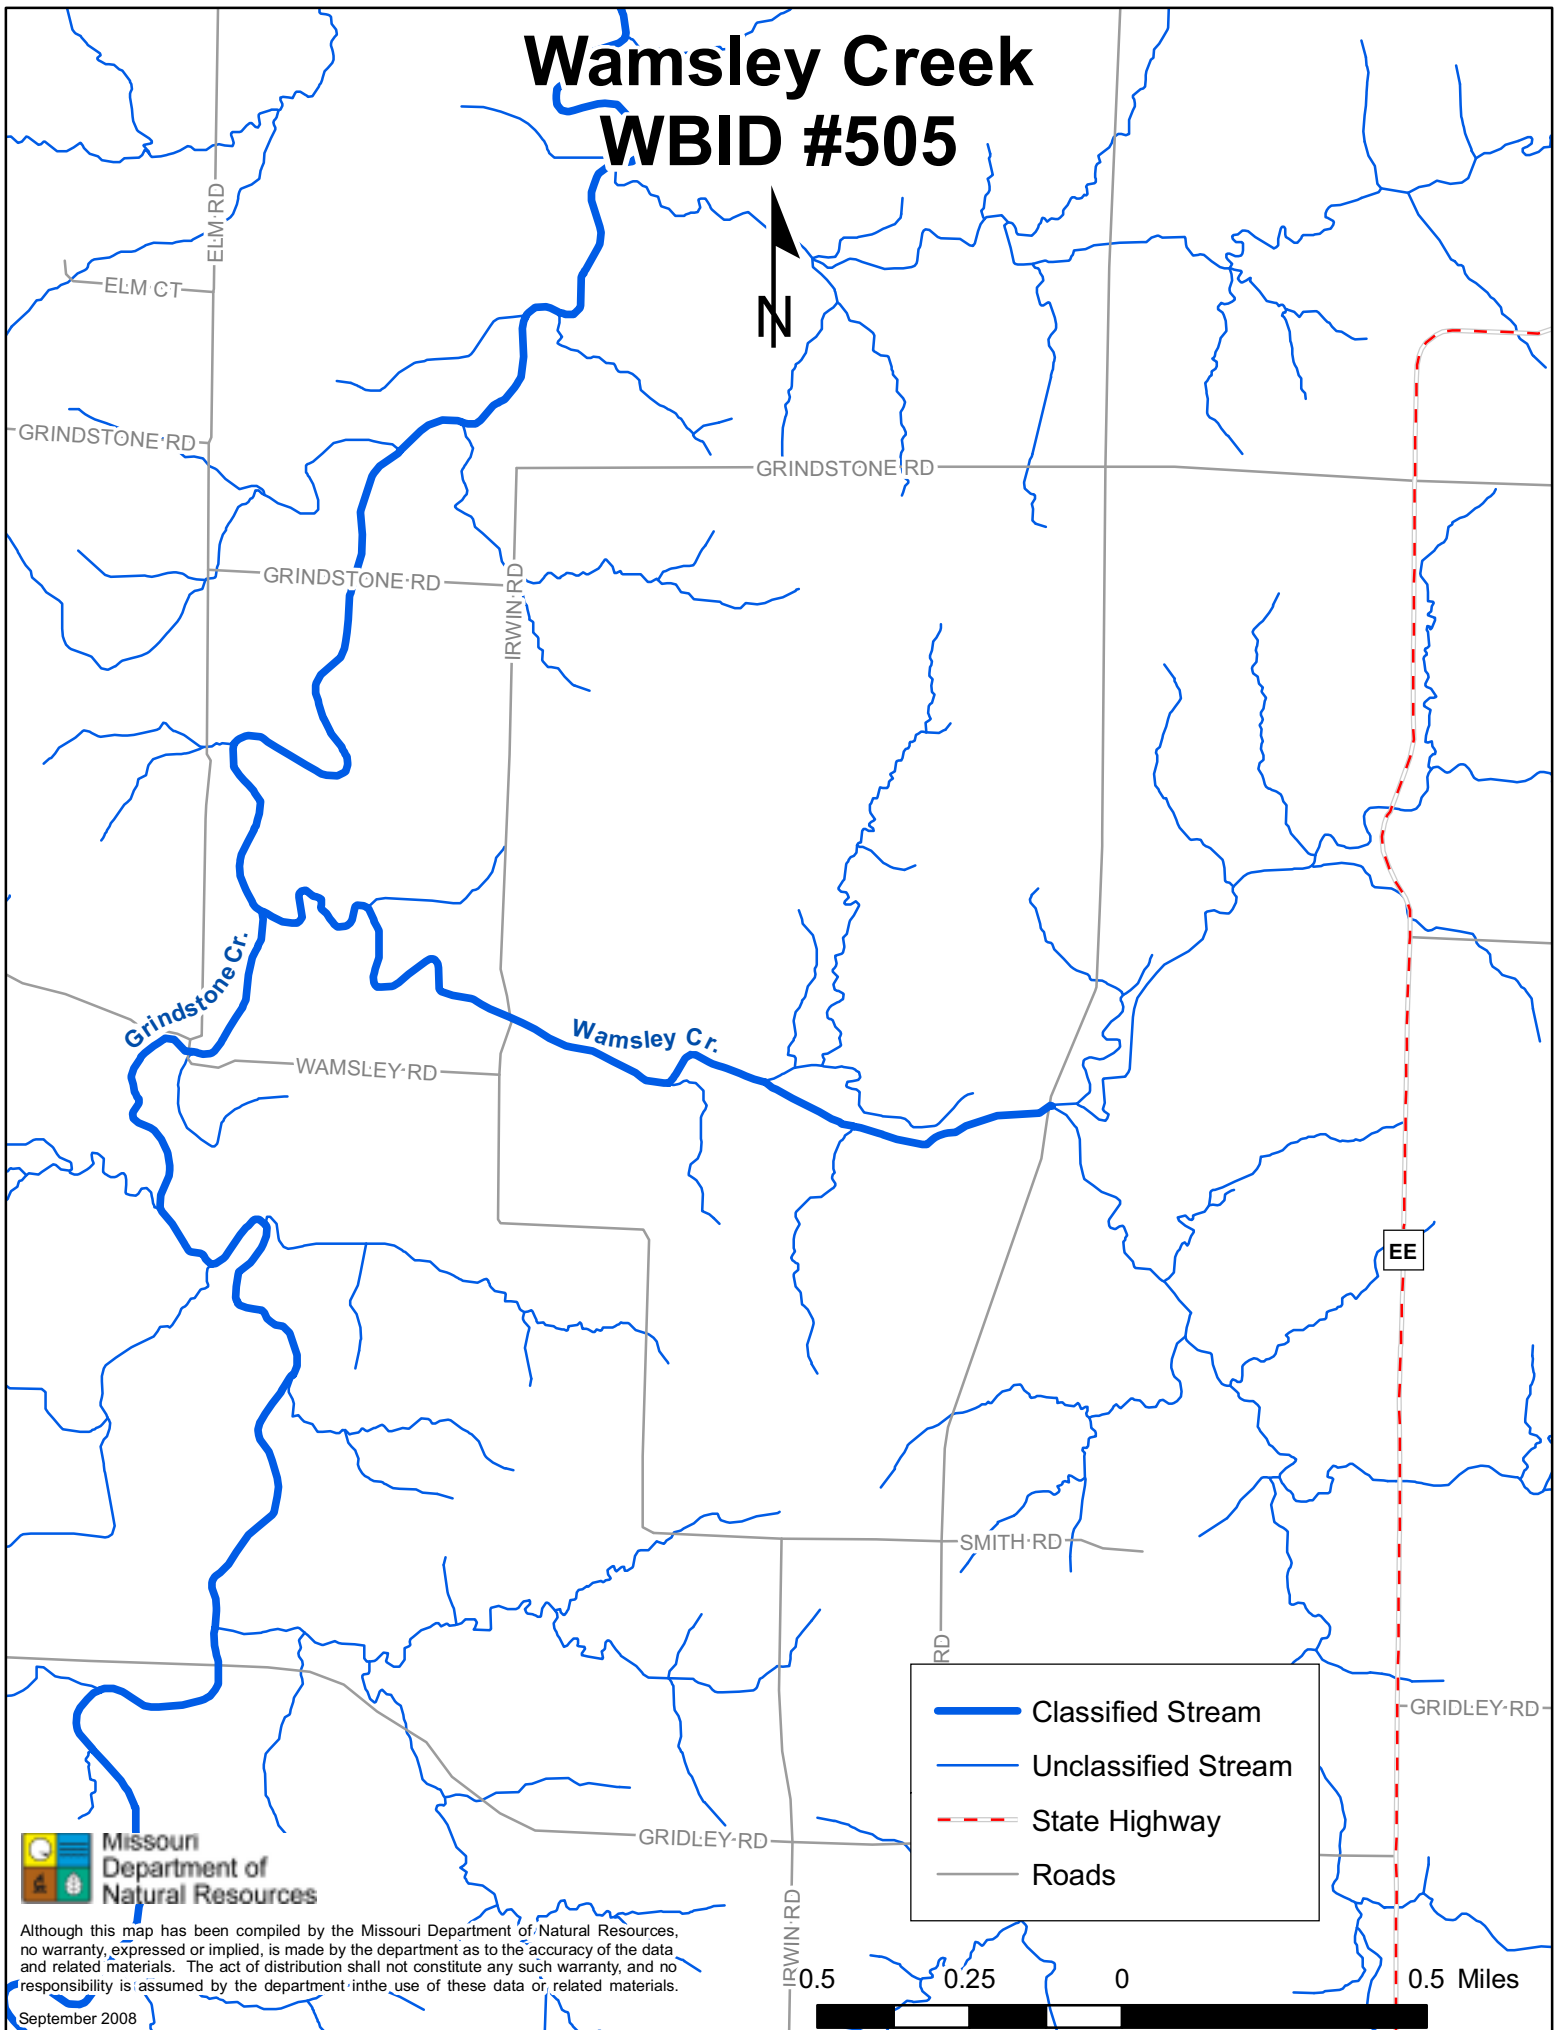

Thanks again for your comments and I look forward to hearing from you.
